Pre-Stretched

by Stone Mountain

ARMORED STRING & CABLE SYSTEM

Like our "Dakota" system, the **TITANIUM** series Strings and Cables are pre-twisted and pre-stretched under 800 lbs of tension. Combined with our unique serving process, this system offers the same non-stretch, zero peep rotation quality coupled with the following features...

Halo Armor Servings

Each string and cable is equipped with Halo serving. This reduces total friction wear, rendering a longer lasting serving with a slip free quality.

Pre-Treated w/ Friction Reduction Conditioner

Each string and cable is pre-treated with FRC prior to the serving process. This application provides additional friction reduction along with overall string protection.

Includes Set-Up Kit

Each set comes complete with 1- 6" length of "Rhino Rope" D-Loop. 1 poly heat shrink "Suppressor Guard" and 1 complimentary stick of Bohning Xccelerator Was & Conditioner.

**ALL GUARANTEED
ALL OUT OF THE BOX!**

Our Service to All

For over fifteen years, Stone Mountain has been a leader in the archery industry. Best known for reliability and performance, our custom bow strings will out perform all others you may have used in the past. You will find our bowstrings as standard stock on many of today's leading manufactured compound bows.

Once you put on one of our bowstrings, you will soon discover the benefits of shooting a Stone Mountain string.

We continue to provide excellent service to all of our customers.

They choose Stone Mountain for our superior product and unbeatable reliability. We offer only the best. With normal use, our products will out perform all other products you have used in the past.

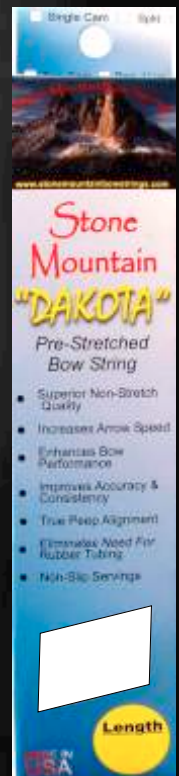

Featuring...

"DAKOTA"

Pre-Stretched

Our "DAKOTA" strings and cables are pre-twisted and pre-stretched under 800lbs of tension to eliminate residual stretch experienced with all bowstrings. This process insures the strings will remain at the desired length through out the life of the product.

The servings on our "DAKOTA" strings are extremely tight and will not slip or separate. This unique serving process eliminates peep rotation and the need for any alignment devices, providing you with a Superior and stretch free string.

When only the best will do!

The need for a higher quality string has never been greater. Each year advancements are made to improve bow speed and performance. Using a lower grade string will only inhibit the bows overall performance. By selecting a higher quality string, you maximize the bows peak performance, enhancing accuracy, consistency, and reliability.

Our "DAKOTA" string and cable systems gives you just that, Superior performance. Each string is pre-stretched with a surprising 800lbs of tension. This crucial process eliminates the need for constant cam trimming and synchronization. Each string and cable is measured and clip to exact specified length.

No Peep Rotation! Our "DAKOTA" strings do not require any peep alignment device. True peep alignment is achieved by our unique serving and stretching process. You will also find that our servings are extremely tight, eliminating serving separation.

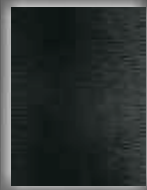

Experience, for your self, the benefits of shooting a premium Stone Mountain string and enjoy true performance.
